Date: January 29,2021

Report Number: PO2021-0002

Report Name: Portuguese Wine Exports Rise in 2020 Despite COVID-19 Challenges

Country: Portugal

Post: Madrid

Report Category: Wine

Prepared By: Carmen Valverde

Approved By: Jennifer Clever

Report Highlights:

Portugal is divided into 14 main wine producing regions. Portuguese wine production for Marketing Year 2020/21 is estimated to drop three percent to 6.3 million hectoliters due to unstable weather conditions. Despite the COVID-19 pandemic, during MY 2019/20, Portugal remained a net exporter of wine with exports rising five percent and valued at \$936 million. Additionally, renewed Portuguese consumer interest in prime quality wines continues to create opportunities for wine imports.

Executive Summary

According to the International Wine Organization (OIV), Portugal is the fifth largest wine producer in the EU and eleventh largest in the world. The Portuguese wine grapes area is the fourth largest in the EU after Spain, Italy, and France. In 2019, the Portuguese planted area for wine grapes stood at 192,743 hectares (ha), a 9 percent reduction compared to the last ten-year average. The major wine-producing Portuguese regions are Douro-Porto, Lisboa, and Alentejo.

According to the Portuguese wine sector, for Marketing Year (MY) (October/September) 2020/21, wine production is estimated to lower three percent from last season to 6.3 million hectoliters (Mhl). This level is two percent lower than the average five-years period. The expected decrease in wine production is due to meteorological instability during the crops vegetative cycle.

In 2020, due to the COVID-19 pandemic and the temporary closure of the hospitality sector, the Government of Portugal availed a package of measures to support the wine sector worth \$22 million. However, Portuguese wine producers only used 60 percent of the aid (\$8.5 million). Additionally, the Portuguese wine industry reports that in 2020, the sector suffered a 50 percent drop in wine sales to domestic Hotels, Restaurants, and Institutions (HRI) due to the government-mandated lockdown in response to the pandemic. Portuguese industry sources do not expect the situation to improve in the coming months, as the epidemiological situation continues to evolve.

Portugal is a net exporter of wine and is focused on diversifying market destinations. According to Trade Data Monitor (TDM), during Marketing Year (October/September) 2019/20 and despite the COVID-19 pandemic, Portugal's global wine exports grew by five percent in volume and 1.7 percent in value compared to the same period of the previous year. Exports during this period were valued at \$936 million and amounted to 306 million liters. The growth was especially important in non-EU markets namely the United States, the UK, Brazil, Canada, and the Baltic countries with significant declines in France, Angola, Germany, and China.

Portugal also imported around \$190 million worth of wine during MY 2019/20, 0.6 percent lower than previous period and chiefly from other European countries. However, over the last five years, the continued rise in the Portuguese purchasing power combined with a growing consumer interest in new and prime quality wines has spurred wine imports. During the last decade, Portuguese imports of U.S. wines (mainly bottled) have increased reaching \$337,000 in MY2018/19. However, the closure of the hospitality sector in response to COVID-19 discouraged Portuguese imports of U.S. wine by 70 percent during MY 2019/20 to \$107,000. Notwithstanding, new consumer trends, new categories of products, new forms of sales and e-commerce will continue to contribute to the rise of both Portugal's wine imports and exports.

Production

Portugal has 14 main wine regions, all producing high quality wines (see Map 1). According to the [Portuguese Wine Institute](#) (IVV), in 2019, Portugal's wine grapes planted area stood at 192,743 hectares (ha), a 9 percent drop compared to the last ten-year average (see Chart 1). Portugal's wine grapes area ranks fourth in the EU after Spain, France, and Italy. The regions of Douro/Tras-Os Montes, Beiras, Alentejo, Minho, and Lisbon are the most relevant in terms of area planted. Around 70 percent of the grapes are designated as Protected Denomination of Origin (PDO), 20 percent are Geographical Indication (GI), and the rest of the grapes are destined for other wines.

The Portuguese wine sector estimates Marketing Year (MY) 2020/21 wine production will drop three percent to 6.3 million hectoliters (MHI). This estimated level of production is also two percent lower than the last five-year average of 6.48 MHI (see Chart 2). Around 53 percent of the wines produced are PDO wines, 33 percent are GI wines, and the rest are wines without PDO/GI designation (see Chart 3). The decrease in overall wine production is based on forecast lower production in the wine regions of Terras de Cister (-35%), Trás-os-Montes (-20%), Douro and Porto (-20%), Terras do Dão (-20%) and the Azores (-15%). Conversely, production in the remaining regions, are forecast to increase, especially the Minho region with the largest increase in volume (+73 thousand hl) and the Lisboa region, with the highest percentage growth. Despite the meteorological instability observed throughout the crop's vegetative cycle and outbreaks of downy mildew, in general, the grapes were in good phytosanitary condition. Portugal is the fifth largest EU wine producer after Italy, France, Spain, and Germany and the eleventh worldwide according to the [International Wine Organization](#) (OIV).

Chart 3. 2019/2020 Portuguese Regional Wine Production by Category (Hl)

Source: Wines of Portugal

In Portugal, the support scheme for the restructuring and conversion of vineyards (VITIS) counts on a budget of \$61 million for the 2021-2022 season. The priority criteria is for vineyards that are intended for organic production, producers with family farming status, historic vineyards and projects of national interest (PIN). Additionally, in 2020, due to the COVID-19 pandemic and the closure of the hospitality sector, the Government of Portugal availed a package of measures to support the wine sector worth \$22 million. Out of this total, \$14.6 million were destined to address what was referred to a “crisis distillation” and the remaining \$7.4 million for storage. However, Portuguese wine producers only used 60 percent of the COVID-19 aid or \$8.5 million.

Consumption

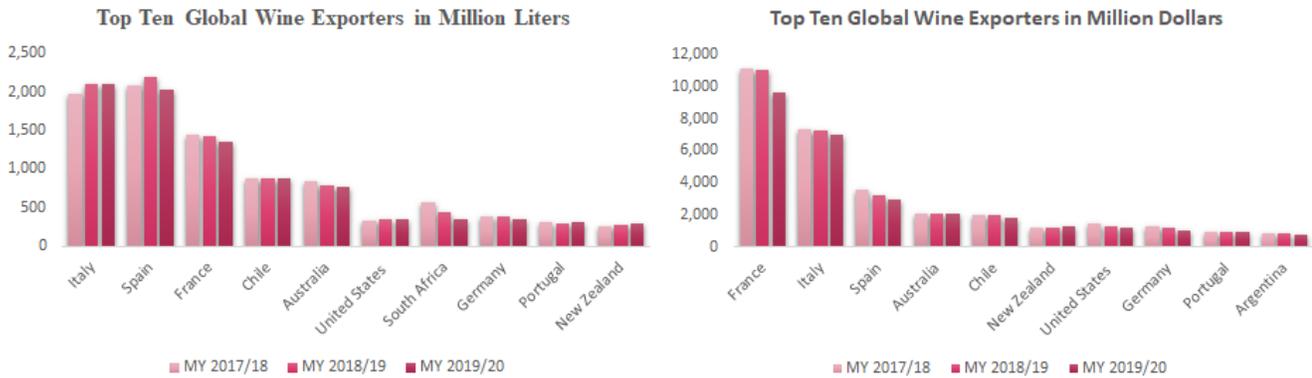

In 2019, according to OIV, the EU accounted for 53 percent of the world’s wine consumption, contributing an estimated volume of about 128 million hectoliters (MHL), and consistent with recent years. Portuguese wine consumption is stable at 5.0 MHL, ranking eleventh worldwide with one of the highest per capita consumption in the world. Portuguese wine consumers are knowledgeable of the product and the new generation of winemakers are also well traveled.

In 2020, according to the Portuguese wine and spirits association, Portugal's wine sector sales to domestic Hotels, Restaurants, and Institutions (HRI) dropped 50 percent due to the mandated lockdown in response to COVID-19. Thus, in 2020, domestic wine consumption is expected to decline by eight percent to 4.6 MHL and may continue below 5 MHL in 2021. Portuguese wine contacts report that the situation is not expected to improve in the coming months, as the epidemiological situation continues to evolve in Portugal and the rest of the EU. In addition, consumer confidence remains low, and the flow of tourism will be catastrophically lower compared to previous years. In Portugal, the wine sector is a major driver of the Portuguese economy, and a relevant sector to maintain rural areas as it provides employment, investments, economic stability, and environmental sustainability.

Trade

Portugal is a net exporter of wine. In MY 2019/20, according to Trade Data Monitor (TDM), Portugal was within the top ten global wine exporters in volume with 306 million liters exported and valued at \$936 million (see Chart 4). Over the past few years, Portugal's wine sector strategy has been to diversify its export markets.

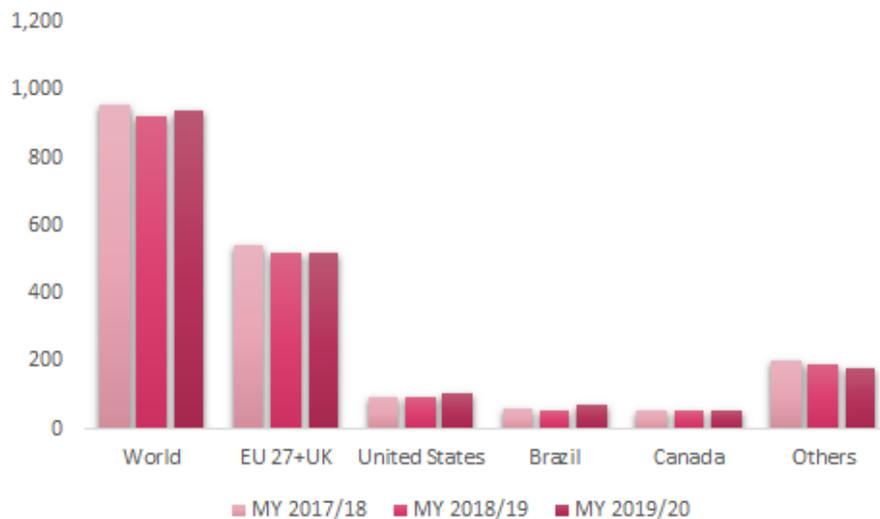

Chart 4. Top Ten Global Wine Exporters MY 2018-2020

Source: TDM

TDM statistics show that during MY 2019/20, despite COVID-19, total Portugal's wine exports rose five percent in volume and 1.7 percent in value compared to the previous season mainly as bottled wines (see Chart 5). Fifty-five percent of Portuguese wine exports during this period were destined to the EU-27+UK. However, exports outside the EU grew significantly due to the closure of domestic HRI. Portuguese exports dropped significantly in France, Angola, Germany, and China. Conversely, exports grew strongly in the United States, the UK, Brazil, Canada, and the Baltic countries. Portuguese wine shipments to Brazil grew by 23 percent to \$71 million. Similarly, over the last decade, shipments to the United States have trended upwards. Since MY 2016/17, the U.S. market became Portugal's second largest wine export destination following the French market.

Chart 5. Portugal's Wine Export MY 2018-2020 (Million USD)

Source: TDM

During MY 2019/20, Portuguese wine exports to the United States increased ten percent to \$106 million. In addition, U.S. tariffs related to the World Trade Organization (WTO) case against EU aircraft subsidies did not affect Portuguese wine exports.

In 2021, the Portuguese wine organization that markets national wines, Wines of Portugal plans to invest \$8.7 million in international wine promotions, which is one of the organization's largest investments in marketing activities. The plan for the next year foresees actions in 21 markets, both face-to-face and virtual formats, namely the participation in the major international wine fairs, wine tastings, and masterclasses to make Portuguese wines known to importers, sommeliers, influencers, media, and other professionals in the sector. In addition to the traditional wine export markets, in 2021, Portugal's wine sector also intends to invest in new markets, with promotional activities envisioned in Belgium, Denmark, Ukraine, and Mexico. China, despite the drop in 2020, remains a strategic market for Portuguese wines as is expanding its presence to new cities in the Chinese market.

Despite its focus on national production to satisfy domestic and export demand, Portugal also imports a diverse range of wines, both for the Portuguese population and for the tourism industry. During MY 2019/20, the value of imported wine in Portugal decreased 0.6 percent to \$190 million compared to last season. COVID-19 and related confinement and HRI closure measures discouraged imports. Correspondingly, after trending upward for the last decade, Portuguese imports of U.S. wines plummeted 70 percent to \$107,000.

The main wine suppliers to the Portuguese market are other EU countries, namely Spain, Italy, and France. Prior to 2020, the rise of the Portuguese purchasing power over the last 30 years, together with a renewed interest in prime quality wines had created an upward trend in imported wines. Additionally, the creation of many trendy wine bars was also fueling wine consumption. These trends could recover depending on the evolution of the COVID-19 pandemic.
